

EMC APPLICATIONXTENDER REPORTS MANAGEMENT

Enterprise reports management for EMC ApplicationXtender

ESSENTIALS

- Maintains format of print stream reports to ensure exact electronic reproduction in PDF format
- Provides a powerful and easy-to-use data extraction tool for intelligent parsing and indexing of reports
- Allows reports to be viewed on workstations or transmitted electronically via e-mail or websites
- Processes reports automatically in the background, facilitating immediate availability

Each day, organizations produce hundreds of thousands of pages of computer-generated reports, such as statements, bills, invoices, policies, contracts, and other internal reports. In the past, these reports have been produced on paper, routed around the organization or mailed to the customer, and subsequently stored on microfiche, microfilm, or paper. Those methods of report creation and distribution are outdated and inefficient compared to what is possible today. Producers and consumers of enterprise reports demand immediate, anytime access. Reports need to be available electronically and accessible on a 24x7 basis from anywhere in the world.

IMPROVE ACCESS TO ENTERPRISE REPORTS

Today's information-centric economy produces reports on high volume, all-points-addressable printers, using print stream technology that includes extensive formatting instructions. But creating reports is only one-half of the equation. Reports must also be available and consumable by the people who need to consult them.

EMC® ApplicationXtender® Reports Management provides report processing for advanced print streams, as well as traditional computer output to laser disk (COLD) text formats, for management within EMC ApplicationXtender. By providing fast and efficient capture of enterprise report data, EMC ApplicationXtender Reports Management turns enterprise reports into e-reports, enabling internal and external report delivery. And by processing, indexing, and archiving enterprise reports for online retrieval, EMC ApplicationXtender Reports Management provides a significant return on investment, allowing organizations to reduce the cost and improve the productivity of multiple business processes. It improves access to information while reducing or eliminating costs associated with paper, film, and microfiche.

EMC ApplicationXtender Reports Management is an add-on ApplicationXtender module and an integral part of the EMC ApplicationXtender family of content management solutions.

CAPABILITIES FOR COLLECTING AND PROCESSING REPORTS

- Includes direct support for IBM AFP, Xerox Metacode, and HP PCL print streams, Adobe PDF, as well as ASCII and EBCDIC(K) text formats
- Maintains the format of print stream reports, including fonts, boxes, logos, and other graphics, as well as interpreting dynamic formatting to ensure exact electronic reproduction in industry-standard PDF format
- Includes forms-overlay capability to enable enhanced presentation for text-based reports

- Provides intelligent, automatic parsing and indexing of reports, including mixed report types, with a powerful, easy-to-use data extraction tool
- Supports multiple indexing rules for basic and complex report processing integration for delivery
- Releases reports automatically for management and viewing within EMC ApplicationXtender clients and web-based browser clients
- Enables customer service representatives to see report information in the same way as customers, improving response to customer inquiries
- Allows reports to be viewed on workstations, accessed over the Web, or transmitted electronically via e-mail

AN AUTOMATIC AND SCALABLE REPORT MANAGEMENT SOLUTION

- Allows you to process reports automatically in the background, facilitating immediate availability
- Includes powerful tools to audit system use and performance, including job status information and confirmation of job completion
- Enables integration with ApplicationXtender Workflow to trigger business processes during report processing
